

TANEET

MEDICAL SPA

NAIROBI

About

Taneet is a medical center for non-invasive aesthetic medicine. It follows world-class standards in private cosmetic healthcare. The center is managed by a qualified doctor and therapists.

We specialize in cosmetic medicine, skin and hair care, body contouring and slimming, cellulite and fat medical reduction, non-surgical facelifts and skin rejuvenation. We offer a wide range of treatments with the latest lasers, lights therapy, mesotherapy, platelets rich plasma therapy (PRP), skin conditions management, hair transplant and many others. We use internationally recognized products for their efficiency and safety.

After your first consultation with our doctor, we offer you a tailor-made “treatment plan” that suits best your needs, lifestyle and expectations. We place a particular emphasis on the level of service, while using the latest technologies for optimum results to ensure a great experience to you.

Laser Hair Removal

Our award winning Alma laser hair removal machine offers the safest and most effective laser hair removal solution available today. We treat men and women of all skin tones and the widest range of hair types throughout the year. The treatment is virtually painless, quick and comfortable, leaving you with the beautiful, silky smooth skin you desire. No more threading, shaving, waxing or any other painful practices required!

We use our Alma laser to achieve superior results thanks to its use of the patented SHR™ technology, which has earned global recognition and is used in top level clinics worldwide.

Treating all parts of the body: We have a variety of applicators that allow us to perform treatments on any part of the body including small and sensitive areas. In a few minutes, hair can be removed from the face, full back, legs, arms, abdomen or any other hard area to reach such as ears, nostrils, between the eyebrows, full Brazilian bikini etc.

Skin Care

Botulinum Toxin Type A (Botox Cosmetic)

This popular non-surgical procedure involves the injection of a small amount of Botulinum Toxin. Botox temporarily inactivates these muscles, lessening and even eliminating the appearance of crow's feet, frown lines, laugh lines, and forehead wrinkles. Botox injections can also create a lifting effect by relaxing the muscles that pull down the eyebrows to raise its ends, correcting a downward slanting "sad eyes" appearance and opening the eyes. Botox has been used safely for wrinkle therapy since the early 1990's.

Dermal Fillers

As we age the skin structure undergoes many changes. The epidermis thins causing the skin to become dry more easily. The dermal layer depletes its supply of normal tissue making it less plump and the elastin fibers become less firm. All of these signs are minimal at first however over time when the fat cells of the subcutaneous layer get smaller, the wrinkles and sagging becomes more noticeable that's why dermal filler can be of great help in restoring the lost volume of the face and correcting aging lines, giving a more youthful and radiant appearance

Mesotherapy

Mesotherapy is an alternative delivery system of medication through injection. Different mesotherapy cocktails with antioxidant, amino acids, nucleic acids and minerals are used to stimulate the regeneration of skin and enhance the production of collagen and elastin. The result is a natural rejuvenation of the skin.

Larges scientific studies has shown the remarkable results of mesotherapy in the treatment of wrinkles reduction, acne scars, skin tightening, hyperpigmentation, hydration/radiance and improvement of the skin quality, as well as in the treatment of cellulite, body fat reduction and body contouring, hair loss and hair care. Mesotherapy is suitable for all ages and all skin types.

Chemical peels

A chemical peel is a skin resurfacing technique in which a chemical solution is applied to the face to remove the outer surface layers of skin, allowing new healthier skin to emerge.

The chemical peel is effective in treating hyperpigmentations and melasma, wrinkles, blotchiness or age spots and scars from acne or other causes, or as a regular beauty routine to maintain a healthy glowing skin. It can be used on the entire face or specific areas, neck and décolletage, back, hands or any other part of the body.

Our doctor will evaluate the condition of your skin and discuss your treatment expectations to give you the perfect type of chemical peel that suits you.

Acne & Acne Scars

Acne can be considered as a chronic condition that usually begins at puberty and can evolve with periods of relapse and remission up to adulthood. Treatment should be customized consistently and adapted to each stage.

During your consultation, our doctor defines the severity of your acne and establishes a therapeutic strategy. Treatments are tailored to each patient's medical needs and history. It may be local, systemic or combined. Many treatments can be used: chemical peels, microdermabrasion, radiofrequency, Photodynamic therapy, antibiotics, topic creams, adequate products for home use etc...

Melasma & Hyperpigmentation

Melasma is a condition seen mostly in women and is characterized by the appearance of brown pigmentation in the form of patches or plaques. The lesions usually appear on the forehead, around the eyes, upper lip, cheeks and rarely in the neck. It is important that the treatment is carried out under medical supervision. Depigmentation is done gently, otherwise, the local irritation caused by medication can lead to worsen the injuries.

The in-office treatment of melasma includes advanced procedures that can be performed only by specialists and are based on modern technologies of medical aesthetics. The doctor combines various methods, depending on the situation and needs of each patient such as chemical peels, mesotherapy whitening, IPL and PDT, and many others therapeutical procedures that will be tailored to suits your case. The home treatment usually includes an adequate combination of products prescribed by our doctor to enhance the effects of the in-office procedure for better results.

Skin Rejuvenation, Skin Tightening & Anti-Aging

Taneet Medical Spa offers a wide range of skin rejuvenation solutions for the face, neck, chest, hands as well as all other body parts. These treatments are also useful to treat laxity of post-pregnancy abdominal skin or after a weight loss journey. We aim to improve hydration, tone and elasticity of the skin's surface to give it back its healthy fresh glow.

Skining Glow or "Coup D'Eclat"

If you want to instantly restore the natural glow of your skin or erase the signs of environmental stress, pollution, fatigue, smoking, drinking or simply a bad night sleep before an important occasion or function, we offer you a quick but immediately efficient treatment to make your skin radiant and looking healthy. Our signature "Coup éclat" treatment is suitable for all skin types and ages.

Platelet-Rich Plasma (PRP)

Platelet-rich plasma (PRP) therapy involves injection of the patient's own platelets and fibrin for cosmetic treatments of the skin and the hair. Also known as the "vampire treatment", the PRP is a natural efficient treatment for many aesthetic problems with a maximum of safety with no risk for rejection, infection, or an allergic reaction as the injected product is made from the patient's own blood. Platelets also contain substances called "growth factors" that activate and rejuvenate cells in our body. It uses the patient's natural biology to address skin defects and volume loss, triggering production of new cells and collagen formation.

Any patient who wishes to rejuvenate the skin and gives it a natural glow, reduce volume loss, fine lines, and textural changes of the skin, or add a natural lift effect, is suitable for this procedure.

Stretch Marks

Stretch marks are a common problem faced by both men and women. Some skin types are more susceptible to stretch marks than others and for some patients the marks can be quite noticeable as raised white or red lines found on the arms, stomach, thighs or breast area.

We offer a variety of "treatment plans" which are suitable for treating the appearance of stretch marks on all skin types.

Our treatments are non-invasive with virtually no recovery time necessary, you can resume your normal activities immediately after treatment.

Hair Care

Hair Loss and growth stimulation

The medical term for hair loss is alopecia. Some people may be affected by widespread hair loss in diffuse alopecia. Others may have focal alopecia, in which hair loss or bald spots develop in small, distinct areas. Other patients can only experience hair thinning all over the head.

You can discuss your concerns related to hair loss with our doctor who will evaluate your case and offer you the adequate treatment to your problem. Microneedling, topical and/or oral medications, PRP, LED and PDT, mesotherapy can all be proposed depending on your specific case.

Hair transplantation

Hair transplantation is based on the principle that hairs moved from one part of the body and implanted in another part of the body, will grow for as long as they would have grown in their donor location. Modern hair transplants can be extremely natural looking and give a satisfying permanent result.

Body Contouring & Non-Invasive Fat Reduction

Cryolipolysis or fat freezing procedure

Cryolipolysis is an innovative medical treatment consisting of removing localized fat deposits by applying cold through the skin in a controlled manner. As a result, the fat tissue is destroyed without damage to the overlying skin. Cryolipolysis is a safe non-invasive method sculpting the silhouette, requiring no downtime. It is a revolutionary technique in the field of aesthetic medicine and the non-surgical body contouring. Common treatment areas include the abdomen, brassiere rolls, love handles, arms, hips, flanks, back, inner thighs, medial knee and peritrochanteric areas.

Cellulite and skin tightening

Many treatments can be combined to treat the cellulite and tighten the sagging skin to give a firmer younger look to your body. We have the newest machines and products to help you reduce the cellulite and get a smoother skin.

Mesolipo Fat Melting Injections

The MesoLipo Fat Melting Injections use the Mesotherapy techniques, and targets localised fat and cellulite deposits. This is a less invasive alternative to liposuction and slowly dissolves the deposits with injections of substances which specially target the fatty cells. After the treatment, the body proceeds to naturally remove the residue over the following weeks.
